

Virtual Processor Post-Mortem Team 8

Project Timeline:

Start Date: 8th January, 2024

End Date: 1st March, 2024

Project Team:

Laura-Lee HOLLANDE, Project Manager

Ian LAURENT, Program Manager

Pierre GORIN, Technical Leader

Victor LEROY, Software Engineer

Manech LAGUENS, Software Engineer

Laurent BOUQUIN, Quality Assurance

Evan UHRING, Quality Assurance

Project Goals and Objectives:

Create a virtual CPU for a hand-made assembly language.

The assembly language must be simple and easy to understand.

What went well:

The project scope was well defined, team collaboration was a success and working together was successful, some aspects such as the unit tests were successful making the testing phase collaborative and productive.

What went wrong:

The kick-off meeting was a bit slower than expected, due to new students not being familiar with the programming language used, the launch of the project was slower than expected.

What could be improved:

Anticipation of the absent student with progress tracking with the Trello Kanban Board and other working tools will allow the team to move in the right direction on the timing desired.
